Representative examples

- In sharp contrast, chiral sulfonium ylides bearing a trigonal pyramidal S-stereogenic center and a carbanion bounded to a positive sulfur have been scarcely reported.. (形成鲜明对比)
- The development of catalytic asymmetric approaches for constructing configurationally stable structures, particularly those with an intermolecular pattern, holds great fascination. (具有极大的吸引力)
- This hypothesis was borne out by the results with B as a representative, although rapid racemization was still observed. (被证实)
